Vidit Malhotra | Data Analyst | Liverpool, UK (Open to relocate) | +447762955508 | Mail | LinkedIn | GitHub

Professional Summary

MSc Data Science & AI graduate (Distinction, University of Liverpool) with hands-on experience building automated data pipelines, ETL workflows, and data validation frameworks across large, heterogeneous datasets. Skilled in Python, SQL, Power BI, and Tableau. Demonstrated ability to clean, reconcile, and analyse complex multi-system datasets to surface reliable insights. Experienced working in environments where data accuracy is non-negotiable. Keen interest in applying these skills to health and population data research.

Technical skills

Analytics & Reporting: SQL (MySQL, MariaDB), Advanced Excel (pivot tables, advanced formulas), Power BI, Tableau, KPI Analysis, EDA, A/B Testing, Statistical Inference, Statistical Modelling, Time Series Analysis

Financial & Operational Data: Revenue & margin analysis, utilisation reporting, data validation & reconciliation, data modelling concepts, Python (Pandas, NumPy)

Data Engineering & Automation: ETL pipelines, data preprocessing pipelines, automated data quality checks, SQL-based extraction, Git, Docker, Regex, API integration, reproducible workflow design

Machine Learning & Data Preparation: Feature engineering, classification, regression, missing value handling, data type standardisation, Scikit-learn, XGBoost, SHAP

Projects

Keyword Indexing of subtitled videos (Dissertation) | Python, PyTorch, Transformers, TF IDF, SBERT

- Built automated ETL pipeline processing 20,000+ records across heterogeneous data types including text, categorical, and time-series segments — designing consistent transformation steps across variable data formats.
- Reduced manual retrieval time from hours to seconds through automated pipeline design, demonstrating large-scale data engineering capability.
- Developed search relevance KPIs (nDCG, MRR) and a Streamlit BI reporting dashboard, improving content discovery efficiency by 50%.
- Collaborated with academic stakeholders to refine data quality guidelines, document edge cases, and deliver structured presentations of findings.

Customer Churn & Retention Analysis | Python, Scikit-learn, XGBoost, SHAP, SQL

- Prepared, cleaned, and validated 10,000+ customer records ensuring consistent feature definitions and high data quality across numerical and categorical variables.
- Built an end-to-end churn prediction pipeline achieving 0.87 ROC-AUC; applied SHAP to translate model outputs into clear, actionable business insights on churn drivers.
- Applied A/B testing and statistical inference to validate retention strategy ROI, demonstrating ability to link analytical outputs to decision-making.
- Engineered automated retraining pipeline with Docker and drift monitoring, producing fully documented, reproducible analytical workflows suitable for reuse across projects.

SaaS Revenue & Churn Analytics Dashboard | Python, Streamlit, Plotly, Pandas

- Built end-to-end pipeline generating and validating 500+ realistic customer records, then developed an interactive dashboard tracking ARR, churn rate, NRR, and LTV across multiple segments.
- Implemented real-time filters across 6 chart types including cohort retention and funnel analysis.

Experience

Xtended Space, India — *Business Development Analyst* **April 2024 – August 2024**

- Cleaned and standardised commercial datasets across 150+ client accounts, producing analysis-ready data to support pricing and utilisation decisions.
- Built KPI dashboards tracking occupancy, pricing, and capacity utilisation; delivered monthly performance reports to senior stakeholders informing operational and revenue strategy.
- Implemented data validation protocols, improving database accuracy to 95%+ and materially reducing manual correction overhead.
- Used HubSpot CRM data to support B2B pipeline tracking and commercial engagement reporting across accounts.

Wiz Extra School, India — *Regional Data Coordinator* **July 2022 – March 2024**

- Built Python and Excel-based revenue forecasting models supporting £250k+ revenue over 18 months at 20–25% profit margins.
- Monitored 15+ institutional KPIs with precise structured data, contributing to a 30% increase in active partners and 18% growth in participation.
- Managed structured engagement data for 7+ annual events across 30+ B2B institutions, ensuring accurate and auditable records for stakeholder reporting.

Education

University of Liverpool, UK - *Msc Data Science & AI - Distinction* **September 2024 - September 2025**

Modules: Database Systems (SQL), Big Data Analytics, Data Mining, Applied AI, and Web Programming.

Mangalmay Institute of Engineering & Technology, India - *BE Mechanical Engineering - Merit* **August 2018 – June 2022**

Modules: Engineering Mathematics (calculus, linear algebra, probability & statistics), Thermodynamics, Fluid Dynamics

Additional Information: Right to work in UK | Available immediately | Open to on-site, hybrid, and remote roles across UK.
